

WRITTEN ASSIGNMENT

Task for Course: DLMARM01-01 – Advanced Research Methods

CONTENT

1. Task.....	2
1.1 Task 1: Experimental Study	2
1.2 Task 2: Engineering Study	2
1.3 Task 3: Empirical Study	3
1.4 Task 4: Interpretative Study	3
2. Additional information for the evaluation of the written assignment	5
3. Tutorial Support	5

1. TASK

Please choose one of the tasks listed below to write your assignment on.

The starting point for your term paper will be the course book, the contents of which will serve as the basis for an in-depth examination of one of the following questions. You are expected to research and cite from sources corresponding to your chosen topic.

Note on copyright and plagiarism:

Please take note that IU Internationale Hochschule GmbH holds the copyright to the examination tasks. We expressly object to the publication of tasks on third-party platforms. In the event of a violation, IU Internationale Hochschule is entitled to injunctive relief. We would like to point out that every submitted written assignment is checked using a plagiarism software. We therefore suggest not to share solutions under any circumstances, as this may give rise to the suspicion of plagiarism.

1.1 Task 1: Experimental Study

If you choose this task, you will prepare a research proposal for an experimental study. The proposal includes the following:

1. **Introduction:** Provide an overview of the research problem, its significance, and the research objective you aim to address.
2. **Literature Review:** Conduct a literature review on the topic to contextualize your research within existing scholarship. Identify gaps and theoretical frameworks relevant to your study.
3. **Research Design:** Describe the experimental design, sampling and pre-processing of data, analysis and synthesis approaches, validation, methodological, and ethical constraints. Justify your choices based on the research objective.
4. **Expected Outcomes:** Address the expected outcomes of your study and how they contribute to advancing knowledge in the field.

The selected topic should align with themes and concepts covered in your study program. It should address a research problem that contributes to advancing knowledge in the field by filling a gap in the existing literature, addressing relevant issues, or offering novel perspectives. The project should be feasible within the constraints of your study program, including time, resources, and access to data or instruments. The chosen topic should be ethically sound in terms of its implementation and impact of study results on society or environment.

1.2 Task 2: Engineering Study

If you choose this task, you will prepare a research proposal for an engineering or development study. The proposal includes the following:

1. **Introduction:** Provide an overview of the demand for a construction or technical system, its value, and the requirements you aim to address.
2. **Literature Review:** Conduct a literature review on the topic to contextualize your research within existing scholarship. Identify theoretical frameworks, construction or development concepts, and instruments or machinery relevant to your study.

3. Research Design: Briefly describe the conceptual design, the requirements engineering process, specification, development, implementation details, and test requirements or test plan.
4. Ethical Considerations: Explain any ethical considerations that apply to the construction or application of the developed system.

The selected construction or system should align with themes and concepts covered in your study program. It should address a relevant and novel solution to an application-oriented issue. The construction or development project should be feasible within the constraints of your study program, including time, resources, and access to data or tools. The construction or system must adhere to societal and environmental standards in terms of its implementation and application.

1.3 Task 3: Empirical Study

If you choose this task, you will prepare a research proposal for an empirical study. The proposal includes the following:

1. Introduction: Provide an overview of the research problem, its significance, and the research objective you aim to address.
2. Literature Review: Conduct a literature review on the topic to contextualize your research within existing scholarship. Identify gaps and theoretical frameworks relevant to your study.
3. Research Design: Describe the setting or study type, methods, instruments, and sampling procedure, analysis techniques, approach to synthesis, validation, as well as methodological and ethical constraints.
4. Expected Outcomes: Address the expected outcomes of your study and how they contribute to advancing knowledge in the field.

The selected topic should align with themes and concepts covered in your study program. It should address a research problem that contributes to advancing knowledge in the field by filling a gap in the existing literature, addressing relevant issues, or offering novel perspectives. The project should be feasible within the constraints of your study program, including time, resources, and access to data or participants. The chosen topic should be ethically sound in terms of its implementation and impact of study results on society or environment.

1.4 Task 4: Interpretative Study

Develop your own research question in the subject area of the module and with reference to the script. This allows you to introduce topics of your own practice and to work on your own research questions. The research question, a rough outline and the procedure must be discussed and approved with the tutor in advance.

If you choose this task, you will prepare a research proposal for an interpretative or critical management study. The proposal includes the following:

1. Introduction: Provide an overview of the research problem, its significance, and the research objective you aim to address.
2. Literature Review: Conduct a literature review on the topic to contextualize your research within existing scholarship. Identify gaps and theoretical frameworks relevant to your study.
3. Research Design: Describe assumptions, ontology, methodology, methods and instruments, analysis techniques, approach to synthesis, validation, as well as methodological and ethical constraints.

4. Expected Outcomes: Address the expected outcomes of your study and how they contribute to advancing knowledge in the field or revealing deficiencies.

The selected topic should align with themes and concepts covered in your study program. It should address a research problem that contributes to advancing knowledge in the field by filling a gap in the existing literature, addressing deficiencies, or offering novel perspectives. The project should be feasible within the constraints of your study program, including time, resources, and access to data or participants. The chosen topic should be ethically sound in terms of its implementation and impact of study results on society or environment.

2. ADDITIONAL INFORMATION FOR THE EVALUATION OF THE WRITTEN ASSIGNMENT

When conceptualizing and writing the written assignment, the evaluation criteria should be considered. Deviating from the explanations there, the criteria for this course are defined as follows:

Evaluation Criteria	Explanation
Introduction	State the overall research objective and elaborate on it either in the form of research questions, scientific or statistical hypotheses, hypotheses, or a combination of these.
Structure	Create your own diagram explicating the research procedure.
Reasoning	Refer in the literature review to relevant theories, definitions, or conceptual standards. Ensure your research topic is valuable, original, and feasible.
Conclusion	Consider the ethical implications of your research process and its expected outcome and propose appropriate remedies.
Language	Ensure your writing is understandable to a wide audience. Limit the terminology to the necessary.
Neatness	For citations, use inline quotes, block quotes, as well as paraphrases. Include at least one suitable original illustration or table from the literature or adapt it accordingly.

3. TUTORIAL SUPPORT

In this written assignment task, several support channels are open; as the student, it is your responsibility to select your preferred support channel. The tutor is available for technical consultations and for formal and general questions regarding the procedure for processing the written assignment. However, the tutor is not required to approve outlines or parts of texts and drafts. Independent preparation is part of the examination work and is included in the overall evaluation. However, general editing tips and instructions are given in order to help you get started with the written assignment.
